

PUBLIC NOTIFICATION

Containerized Dry Bulk Handling Project

Project Description:

DP World Fraser Surrey is proposing to acquire and utilize specialized revolving heads on up to three existing gantry cranes in order to facilitate the handling of containerized dry bulk cargoes at their DP World Fraser Surrey Site. DP World anticipates handling a wide range of containerized dry bulk cargoes, which include, but are not limited to copper concentrate, potash, wood pellets & chips, and zinc and lead concentrates. The utilization of the specialized revolving heads would allow cargoes to be handled more efficiently. A mobile dust suppression unit fitted around the rim of the vessel hatch would emit water mist to prevent dust from escaping the hold of the vessel.

Project Activities:

- Temporarily replacing the standard spreader heads of the gantry cranes used for unloading containers with the specialized revolving heads ("rotainers").
- Existing equipment in the container yard would be used to move the "rotainers" in the same manner as existing container volumes.
- The mobile dust suppression unit would connect to existing water supply services on site.

This project does not require physical works or construction, and increased noise is not anticipated.

Project Timeline: Early 2021 to Fall/Winter 2021

Work Hours: DP World Fraser Surrey is a 24 hour a day, 7 day a week operation. This project should not impact these hours.
