**ECOLOGICAL IMPROVEMENTS**

0 25 50 100m

### NATIVE PLANTING & WILDLIFE HABITAT

With swathes of native low maintenance shrubs and bulbs, the parks aesthetic can be dramatically improved.

Flowers will seasonally bloom, providing forage for native species and series of nurse logs will create habitat for native bees and butterflies.

### ACCESSABILITY

Improving the existing footpaths and entrances, by widening and decreasing grades, will support many more users within the space.

### BOUNDARY TREATMENT

To clearly define the boundary of the park and shoulder the road, a split rail fence and meadow will visually limit the parking area.

**A unique park within  
the city**

**Define the boundary  
and highlight the  
entrance to a beautiful  
park.**

**Create a safe and  
accessible space for all  
residents to use.**

**Redefine the seating  
and create social  
spaces.**

**Native wildflower  
Meadows**

**Provide habitat for  
many species of birds,  
bees and butterflies.**

## **KEY OPPORTUNITIES**
